

ECO FRIENDLY CARBON BLACK

PRODUCT OF: DRIVEN ENTERPRISE COMPANY

ESTABLISHED IN 2002

Recovered Carbon Black complies with ASTM standard

"DRIVEN ENTERPRISE COMPANY" has 18 years of worldwide experience in the field of manufacturing and exporting of recovered carbon black. Our technical team has received adequate training to give high-quality inputs in terms of both knowledge and efficiency.

ISO 9001-2008, GMP, FREE SALE CERTIFICATE, KOSHER DECLARATION & HALAL CERTIFIED

"Driven Enterprise Company" has become a trusted brand for customers due to its zeal and passion for providing inventive, cost-effective solutions and ongoing dedication to supplying excellent goods.

We are 100% export oriented company and there is practically no country in the world where the DRIVEN products have not reached, either direct from us or through our buyers who re-export our products to many countries.

We specialize in the manufacturing of **Recovered Carbon Black (rCB)**, a sustainable product obtained through the recycling of end-of-life tires and rubber products. This eco-friendly process involves pyrolysis, where waste materials are heated without oxygen, resulting in the formation of carbon black and the breakdown of organic compounds. The rCB we produce boasts high purity, consistent quality, and comparable performance to traditional carbon black.

focuses on processing waste hydrocarbons and producing valuable hydrocarbons in a manner that positively impacts environment by reducing greenhouse gas emissions. We only process carefully sorted and selected high quality crumb rubber in presence of chemical accelerators in our patented world's first 100ton/day continuous processing plant and about 60ton of carbon dioxide emission while producing 30 ton/day of ECO-FRIENDLY CARBON BLACK. The carbon black produced at our facility goes through vigorous multi stage very high temperature Mineral and Chemical infusion process followed by pelletizing and packing, This infusion creates very porous carbon structure that provides superior bonding properties and also the infusion enriches our carbon black with valuable and commonly added minerals in rubber formulations. This way our carbon black matches or exceeds the quality of commonly available costly prime carbon black.

RECOVERED CARBON BLACK GRADES

1) # GRANULAR GRADES

SS- 330

SS- 550

2) # POWDER GRADES

SH- 665

Choosing rCB over conventional carbon black offers numerous advantages. It proves to be cost-effective, helps reduce the carbon footprint, and supports the transition towards a greener and more sustainable future. With our dedication to quality and innovation, we strive to play a significant role in fostering a more eco-conscious and responsible manufacturing landscape.
